

EDUCATION AND SERVICE PARTNERSHIP

QUALIFY IN ON-SITE FIRE PROTECTION
OF WOOD STRUCTURES

Nordtreat provides professional surface treatment companies education to qualify in B-s1, d0 compliant on-site fire protection. Trained fire retardant treaters are authorised to provide high-end fire protection for wood surfaces with innovative Nordtreat fire retardants.

BECOME AN AUTHORISED NORDTREAT ON-SITE SERVICE PARTNER!

Now you can enhance your surface treatment portfolio with authorised B-s1, d0 compliant fire protection treatment for wood surfaces. Nordtreat provides education for selected surface treatment companies in several markets. This includes foremen responsible for organising and reporting the treatment process as well as individual treaters who learn to conduct and document all work phases in order to comply with B-s1, d0 requirements.

The increasing demand for sustainable wood construction is supported by ecological and durable fire protection solutions. Treatment competence with Nordtreat's new generation fire retardants offers authorised partners growth and success opportunities.

NORDTREAT ON-SITE PARTNERS GET

- Wider and more attractive service portfolio

- New valuable competences

- Nordtreat support and new offer requests

- Further education on Nordtreat products and partner services

ON-SITE FIRE PROTECTION EDUCATION IN A NUTSHELL

The process to become an authorised Nordtreat on-site service partner starts like this:

Basic education is usually done via live e-learning. It takes 2 hours and contains the following modules:

1. Wood construction and fire protection of wooden structures
2. The equipment and conditions requirements for fire protection treatment with Nordtreat's fire retardants
3. Preliminary treatment of the wood surfaces and treatment with NT DECO
4. Monitoring and documentation of conditions, limit values and fire retardant use
5. Settling and drying time and other things to keep in mind

It is also possible to organise the basic education combining e-learning and onsite training. In a live situation, the new skills are tested and evaluated in practice.

SECURE SUSTAINABLE FIRE SAFETY FOR WOOD PRODUCTS

Nordtreat's fire retardants provide excellent fire performance properties for wood products. There are two ways to make sure the required Euroclass B-s1, d0 fire protection is met. If the use of industrially fire protected and certified wood products is not an option, the requirements can be met by using a Nordtreat authorised fire protection treater. They manage, control and document the on-site fire protection strictly according to Nordtreat certified processes.

B-s1, d0 compliant on-site treatment with Nordtreat fire retardants are suitable for the following wood surfaces:

- CLT, LVL, logs and other engineered wood structures
- Assembled panels and claddings
- Other assembled wood structures
- Maintenance treatment of wood surfaces which have been earlier fire protected with Nordtreat products
